DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-2 and 5-11 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

Claims 1-2 and 5-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 60-177446 in view of US 5,914,214.

The Japanese reference discloses an optical recording medium comprising a substrate, a phase-change alloy, and a protective dielectric layer. The alloy layer is formed of an indium-antimony alloy where the antimony is present between 55-80 % and the alloy may comprise one or more elements selected from the group including Ga and Ge (See Abstract). More specifically, the alloy is a ternary alloy such as $(\text{In}_{0.2}\text{Sb}_{0.8})_{0.9}\text{Ga}_{0.1}$ (see p. 266). This alloy has the percentage of Sb in the claimed range (72%). It is recognized that the reference is silent as to a dielectric layer between the substrate and the alloy layer, a SiN layer over the dielectric protective layer, or a reflective layer over the SiN layer. However, the '214 reference discloses that these features are known in recording media utilizing a Ga-In-Sb recording layer. Therefore, it would have been obvious to one of ordinary skill in the art to incorporate these features into the '446 medium. One would expect to obtain an improved protective property of the lower dielectric and SiN layers and an improved recording property of the reflective layer found in the '214 medium.
